

ABSTRACT OF THE DISCLOSURE

The invention relates to a bag (1) in the form of a double bag, consisting of at least two layers (E_1 et E_2) of material. Said layers are the same shape and have the same dimensions, are superposed and interconnected along the periphery (2-5) thereof in such a way that they define two pockets (P_1 et P_2) which are accessible by an opening (7) made in the longitudinal direction of the bag (1). Furthermore, the material forming at least one of the layers (E_1 et E_2) is extensible in the machine direction and/or in the cross-machine direction.
